

Shriram Raja

Boston, MA

✉ shriramr@bu.edu | 🏠 shriram-raja.github.io | [in](#) [shriram-raja](#)

RESEARCH INTERESTS

Scheduling, Heterogeneous Architectures, Resource Management, Synchronization, Virtualization

EDUCATION

Boston University, Boston, MA

Sep 2023 - Present

Ph.D. in Computer Science

- Advisor: [Dr. Richard West](#)
- Coursework: Introduction to Operating Systems, Computing Systems for Robotics, Advanced Algorithms, Artificial Intelligence

Virginia Tech, Blacksburg, VA

Aug 2021 - May 2023

Master of Engineering, Computer Engineering

- Advisor: [Dr. Haibo Zeng](#)
- Project Title: Hybrid Priority Assignment for Global Fixed Priority Scheduling

PSG College of Technology, Coimbatore, India

Aug 2017 - May 2021

Bachelor of Engineering, Electrical & Electronics Engineering

PUBLICATIONS

- [A1] Richard West, Zhiyuan Ruan, **Shriram Raja**, and Rafiuddin Syed, “Tutorial: Mixed-Criticality Computing with the Quest RTOS and Quest-V Partitioning Hypervisor”, *25th ACM SIGBED International Conference on Embedded Software (EMSOFT)*, 2025 [[Paper](#)] [[DOI](#)]
- This abstract gives an overview of the Quest-V Software Development Kit and serves as companion document to the tutorial we organized as a part of EMSOFT 2025.
- [J1] Xuanliang Deng*, **Shriram Raja***, Yecheng Zhao, and Haibo Zeng, “Priority Assignment for Global Fixed Priority Scheduling on Multiprocessors”, *IEEE Transactions on Computer-Aided Design of Integrated Circuits and Systems (TCAD)*, 2024 [[Paper](#)] [[Code](#)] [[DOI](#)]
- Proposed a priority assignment algorithm for Global Fixed Priority (G-FP) scheduling that combines the advantages of heuristics and response time estimation (instead of actual response time) to outperform existing methods by 25 percentage points on average.
 - * - contributed equally

EXPERIENCE

Boston University

Sep 2023 - Present

Research Fellow

Boston, MA

- Developed bounded priority-aware kernel locks for [Quest RTOS](#)
- Implemented kernel compartmentalization using hardware virtualization features on x86 processors
- Contributed to the [Quest-V Software Development Kit](#) which supports Quest and Yocto Linux guests

Virginia Tech

Mar 2022 - May 2023

Research Assistant

Blacksburg, VA

- Developed, implemented and evaluated a novel Global Fixed Priority scheduling algorithm for multicore real-time systems, advised by [Dr. Haibo Zeng](#)

Security Solutions, Marvell Semiconductor

Firmware Engineer Intern

May - Aug 2022

Santa Clara, CA

- Implemented FRAM Logging feature in LiquidSecurity Cloud Hardware Security Module to collect debug information during boot-up

TEACHING EXPERIENCE

CS 410 Advanced Software Systems, Teaching Fellow, Boston University

Spring 2025

CS 552 Operating Systems, Teaching Fellow, Boston University

Fall 2024

ECE 5480 Cybersecurity & IoT, Grad Teaching Assistant, Virginia Tech

Spring 2022, 2023, Fall 2022

SERVICE AND PRESENTATIONS

Shadow Technical Program Committee

Euromicro Conference on Real-Time Systems (ECRTS)

2025

Tutorial/Education Class

Getting Started with the Quest RTOS & Quest-V Partitioning Hypervisor

RTSS 2024, ESWEEK 2025,

RTSS 2025

Secondary Reviewer

- Software: Practice and Experience 2025
- IEEE Real-Time and Embedded Technology and Applications Symposium (RTAS) 2025
- IEEE Real-Time Systems Symposium (RTSS) 2024

PROJECTS

i386 Custom Bare-metal Operating System

Fall 2023

Developed a bare-metal operating system for 32-bit x86 systems that uses preemptive FIFO scheduling and supports a simple file system.

Scheduler for Real-Time Operating Systems

Apr 2022

Programmed different periodic scheduling algorithms, resource management protocols, and a polling server for FreeRTOS. Determined the best priority that can be assigned to the polling server by analyzing the response time of aperiodic tasks by varying periodic load for different test cases when executed on an Arduino Mega 2560.

LLVM Optimization Pass

Apr 2022

Implemented the Lazy Code Motion (LCM) algorithm to eliminate redundant statements and move arithmetic expressions to the latest point in the program without modifying the functionality of the code. Evaluated the performance of the optimization pass using open-source benchmarks.

CPU Profiling Tool for Linux

Nov 2021

Used Kprobe to track the cumulative run time and the number of times each task is scheduled by the Linux scheduler. Created and maintained a red-black tree that stores the run time of the tasks. The 20 most scheduled tasks are identified, and their stack trace is displayed using the /proc file system.
